Board Finding Number 3.

The average salary level of qualifying jobs is expected to be at least \$27,742 per year. The review of the application by the State Comptroller's Office indicated that this amount—based on Texas Workforce Commission data—complies with the requirement that qualifying jobs must pay 110 percent of the county average manufacturing wage. Capricorn Ridge Wind II, LLC indicates that total employment will be approximately three (3) new jobs.

In support of Finding 3, the economic impact evaluation states:

The following table highlights the total employment for the wind farm project and allocates capital investment in Robert Lee ISD. Based on approved Texas Economic Development Act wind farm applications and industry standards, the typical wind farm employs one person per 15 wind turbines. Capricorn Ridge's project is consistent with this ratio.

For this analysis, TXP has focused on calculating the economic impact of Capricorn Ridge energy investment in Coke County. In part, the process entails combining

* TXP has applied an inflation factor to the payroll data based on growth in the county's average annual wage over the past ten years.

Board Finding Number 4.

The level of the applicant's average investment per qualifying job over the term of the Agreement is estimated to be approximately \$21.7 million on the basis of the goal of three new qualifying positions for the Capricorn Ridge Wind projects.

The benefits of Capricorn Ridge to Coke County economy consist of the day-to-day operation of the wind energy project, normal operating expenditures, purchases from local vendors, and spending of people employed by these businesses. The economic benefits of this economic activity materialize primarily in the form of increased Coke County employment and income.

As stated above, TXP has calculated the total economic impact of business activity of Capricorn Ridge based on annual investment and employment levels. Specifically, this analysis measures the anticipated economic impacts of Capricorn Ridge's wind energy project using the IMPLAN input-output economic system, RIMS II, and the Job and Economic Development Impact model (JEDI). TXP has customized the models by
